

THE HONDA CBR 125R IS A GREAT MOTORBIKE FOR BEGINNERS

The CBR125 was introduced in 2004 by Honda to fill in a gap in the 125 cc market left by the discontinued Honda NSR125.

It is powered by a liquid-cooled four-stroke, two-valve SOHC, single cylinder 124.7 cc engine with a claimed power rating of 10 kW (13 hp).

2004 to 2006 - The models produced during these years resemble the CBR600 F4i and use a carburetor in the fuel system.

The Repsol color scheme was introduced in 2005 and remained for the following year only as the CBR125RS5/6.

2007 to 2010 - In 2007, the CBR125R received some major changes including fuel injection. The 2007 model received new front fairings to resemble the look of the CBR600RR as well as colour changes to the swing arm and front forks which are now black.

Engine changes included PGM-FI: electronic fuel injection, IACV (Idle Air Control Valve), which operates with the FI system, and HECS3 oxygen sensor to comply with EURO-3 regulations.

2011 onwards - In 2011, the CBR125R received the first major overhaul since its inception, bringing its looks in line with the 2011 Honda CBR250R, which in turn borrows from Honda's VFR1200F sports tourer.

THE 125CC SPORTS BIKE CLASS IS WHERE RIDING EXPERIENCES BEGIN.

For the vast majority of new riders, whether on road or on the race circuit, these machines are the first step on a path that could lead anywhere. The CBR 125R's Race-Ready good look, breathtaking performance and exceptional control provide a quick and easy entry into the real motorbike supersport

The bike has all the qualities of a superbike on the racetrack:

- 1 ACCELERATION**
- 2 CORNERING**
- 3 CONTROL**
